## Summary

Backend Software Engineer with 2+ years of experience building reliable, scalable **distributed systems** and production services. Hands-on experience with **Go**, **event-driven architectures**, **cloud-native infrastructure**, **observability**, and **cross-cloud data pipelines** across **GCP and AWS**.

## Experience

**Ericsson Enterprise Wireless Solutions (formerly Cradlepoint)** **Bengaluru, India**

*Software Development Engineer (SDE-1)* *Jul 2024 – Present*

- Migrated a production **SLA metrics pipeline** from **GCP to AWS using Kafka** as part of a cross-platform consolidation, ensuring **99.99% availability** while preserving accurate uptime/downtime analytics.
- Designed and owned a **YAML-driven alert automation workflow**, replacing framework-level code changes with declarative configuration and reducing alert onboarding time from **2–3 days to 1–2 hours**.
- Developed **REST APIs** for a local network management platform, replacing cloud-based port-status retrieval with direct **peer-to-peer communication** between Network Controllers and reducing response latency by **∼25%**.
- Integrated **OpenTelemetry** into a **cross-cloud telemetry pipeline** to route network data from GCP through **Kafka**-based AWS infrastructure into **Amazon Redshift** during a two-platform consolidation, maintaining end-to-end data integrity with **<0.01% data loss**.
- Migrated infrastructure provisioning from **Terraform to Crossplane** across **5 services**, including database resources deployed across 4+ environments, enabling Kubernetes-native declarative resource management.

*Software Engineer Intern* *Jan 2024 – Jun 2024*

- Built **Pub/Sub-based event-processing workflows** in **Go**, enabling internal services to publish events that trigger customer-facing notifications and emails.
- Developed core **SLA computation logic** to calculate service uptime and downtime across **300+ production sites**, processing **∼20 metrics per site** to support accurate service-health and availability reporting.
- Implemented **scalable SIEM log-destination workflows** for forwarding portal login and user activity logs to external systems, handling **50K+ events/day in production** while improving customer security audit visibility.

## Skills

**Languages:** Go (Golang), C++, Java, Python, JavaScript, SQL

**Backend:** REST APIs, Microservices, NGINX

**Databases:** PostgreSQL, MySQL, Redis

**Distributed Systems & Architecture:** Distributed Systems, Event-Driven Architecture, Asynchronous Processing, Messaging Queues

**Messaging & Observability:** Apache Kafka, Google Cloud Pub/Sub, OpenTelemetry, Prometheus, Grafana, Thanos, Datadog

**Cloud & DevOps:** Docker, Kubernetes, CI/CD, Linux

**Frontend:** HTML, CSS, DOM, React.js

**Tools:** Git, Postman, JIRA, VS Code

## Projects

**NetPulse AI – Real-Time Network Observability Platform**

*Go, Kafka, PostgreSQL, Redis, Prometheus, Docker, LLM API*

- Engineered a real-time observability platform using **Go and Kafka**, processing **1K+ telemetry events/sec** to detect latency, packet loss, and connectivity anomalies.
- Architected **event-driven microservices** using Kafka, PostgreSQL, and Redis, **reducing read latency by ∼25%** for frequently accessed device-health data.
- Built an **AI-driven incident analysis service** generating root-cause insights and troubleshooting recommendations in **<3 seconds**; added **Prometheus** for service health, throughput, and latency monitoring.

## Education

**Chitkara University** **Rajpura, Punjab, India**

*Bachelor of Engineering in Computer Science* *CGPA: 9.54*
